

I, (with my 6 yr old daughter) drive in areas that cannot receive traditional radio signals. In these areas, weather conditions as well as traffic are (at times) critical. This is not information that should be blocked! Do not cut off my _only_ access to this information!! I will press suit if I or my daughter or my property is damaged because you allowed the NAB to remove my access (that I currently have) to public service information! That is criminal that anyone would consider such a thing! As to the regular programming - It's clean and predictable. No condom adverts in the middle of otherwise acceptable music. No jocular "radio talk" un-expectedly. Sat. radio has \$\$ already, they don't have to try to shock on channels that otherwise would not need such background chatter to attract listeners. Tell me where I can dial into an all 50' radio show. Swing. Etc. My daughter's musical education is progressing nicely because of these channels. Channels that are not available on radio, or so loaded with static and advertisements as to be pointless.

Do the right thing for a change! Let people choose their programming.
